

**Survey Question:**  
***“How quickly after the birth did you get to hold your baby?”***

**Information about the survey:**

- Mums we surveyed reported that in 7 out of 10 cases they got to hold their baby within 5 minutes of giving birth and in 8 in 10 cases they got to hold their baby within 10 minutes of giving birth.
- However, less than half of mums hold their baby immediately after giving birth (0 to 1 minute).
- 2% of women don't get to hold their baby for an average of one day after the birth – this is usually when the baby is born prematurely or because of serious health problems with the mother or child.
- Whether or how quickly you get to hold your baby (or how much attention it needs from Healthcare Professionals) is normally determined using an 'APGAR' scoring. This 'test' is conducted 1 and 5 minutes after birth and measures Appearance, Pulse, Grimace, Activity and Respiration of your baby on a total rating scale of 0 to 10. Scores below 7 normally mean some level of intervention is

considered by the Healthcare Profession. See the link on APGAR below to find out more.
